

How to achieve Deep Energy Retrofit in a cost effective way?

Annex 61

Dr. Alexander Zhivov, US Army ERDC, USA

Mr. Rüdiger Lohse, KEA, Germany

Deep Energy Retrofit (IT-Tool)

Graz, Austria

September 21, 2015

Background

- Governments worldwide are setting more stringent targets for energy use reductions in their building stocks
- To achieve these goals, there must be a significant increase in both the annual rates of building stock refurbishment and energy use reduction, for each project (EU: refurbishment rate of 3% p.a., USA: 3% p.a. site energy reduction compared to CBECS 2003 through 2015 and 2.5% between 2015 and 2025)

How to Meet Energy Goals?

Using available annual budget for many cheaper shallow renovations saving , instead of using fewer, more expansive deep energy renovations saving may lead to unwanted, irreversible long-term consequences. For meeting short term goals “shallow renovation” with the best ROI ratio may look better, than a deep energy renovation strategy, while it will fail to achieve long term energy goal.

US Federal Facilities: Energy Intensity (Btu/GSF) Reduction Vs. Goal

Overall Government Progress Toward Facility Energy Efficiency Goals,
FY 2003 - FY 2014

PRELIMINARY DATA

Annex 61 Objectives

- To provide a framework and selected tools and guidelines to significantly reduce energy use (by more than 50%) in public buildings undergoing major renovation
- To gather and, in some cases, research, develop, and demonstrate innovative and highly effective bundled packages of ECMs for selected building types and climatic conditions
- To develop and demonstrate innovative, highly resource-efficient business models for retrofitting buildings using appropriate combinations of public and private funding

Receptors

- Executive decision-makers and energy managers of public and governmental administrations
- ESCOs
- Financing industries
- Energy utility companies
- Designer-, architect- and engineer-companies
- Manufacturers of insulation, roofing materials, lighting, controls, appliances, and HVAC and energy generation equipment, including those using renewable sources.

Subtasks

- **Subtask A:** Bundles of Technology: Prepare and evaluate case studies on existing deep energy retrofit concepts. Develop a guide for achieving financially attractive deep energy retrofits of buildings and building communities.
- **Subtask B** - Develop business models for deep energy retrofit of buildings using combined government/public and private funding

Subtasks (Continued)

- **Subtask C:** Demonstrate selected deep energy retrofit concepts using combined government/public and private funding, and prepare case studies describing completed and/or partially completed projects.
- **Subtask D:** Develop an IT-tool for decision-makers and ESCOs that emphasizes low-risk approaches for early stages of design and decision-making.

Major Renovation: BAU

Examples of calculated % of energy use reduction with major renovation projects from pre-1980 baseline to current minimum energy standards

- USA :
 - Barracks (c.z. 1A – 8) EUI_{site} : **8-16%**
 - Administrative building: EUI_{site} : **8-22%**
- German Administrative Buildings (c.z. 5A) EUI_{site} : **40%**
- Danish School (c.z.6A): EUI_{site} : **19%**;
- Austrian residential building (c.z. 5A): EUI_{site} : **29%**

EU Energy Performance of Buildings Directive (EPBD 2010)

- Member States shall develop policies and take measures such as setting targets to stimulate the transformation of buildings to be refurbished to a nearly zero-energy condition.
- A Member State shall not be required to set minimum energy performance requirements that are not cost-effective over a building's estimated economic lifecycle.
- A nearly zero-energy building is defined as *“a building that has a very high energy performance. The nearly zero or very low amount of energy required should be covered to a very significant extent by energy from renewable sources, including energy from renewable sources produced on-site or nearby.”*
- The term “high performance building” (as used in Austria, Germany, the Czech Republic, and Denmark) was developed by the Passivhaus Institute (PHI) for the German building market, and has the same definition as “nearly zero-energy.”

Annex 61 Objectives

- To provide a framework and selected tools and guidelines to significantly reduce energy use (by more than 50%) public buildings undergoing major renovation
- To gather and, in some cases, research, develop, and demonstrate innovative and highly effective bundled packages of ECMs for selected building types and climatic conditions
- To develop and demonstrate innovative, highly resource-efficient business models for retrofitting/refurbishing buildings using appropriate combinations of public and private funding

Annex 61 Definition of Deep Energy Retrofit

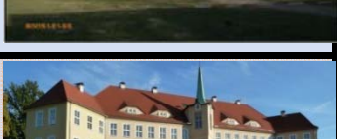

Deep Energy Retrofit (DER) is a major building renovation project in which site energy use intensity has been reduced by at least 50% (including plug-loads) from the pre-renovation baseline.

How to Achieve DER ?

European Experience

| Measure | Germany | Austria | Denmark |
|---|---|---|---|
| Wall insulation | 12-24 cm (0.20-0.10 W/m ² K) | 16 -20 cm (0.20 - 0.10) W/m ² K | 15-30 cm |
| Roof insulation | 20 - 40 cm (0.20- 0.10 W/m ² K) | 20 - 40 cm (0.20- 0.10 w/m ² K) | 20-40cm |
| New Windows | 0.8-1.1 W/m ² K | triple glazing (0.70 - 0.90 W/m ² K) | U-value down to 0.5-1.2 W/m ² K |
| Unheated basement ceiling insulation | 5-20 cm (0.25- 0.10 W/m ² K) | 10 - 20 cm (0.20 - 0.10 W/m ² K) | 10-20cm |
| Reduction of thermal bridges | Reduction as good as reasonably possible | | <u>Foundation:</u> < 0.15W/mK <u>Windows:</u> < 0.8-0.5 W/mK |
| Improved building envelope air tightness | n50 value = 1.0 1/h - 0.6 1/h (Low-energy buildings + (Passive houses) | n50 value = 1.0 1/h - 0.6 1/h (Low-energy buildings + Passive houses) | q(50pa): from 4l/s/m ² to 1.5l/s/m ² |
| Ventilation system heat recovery | Heat recovery rate: 65 - 80% | Heat recovery rate 65 - 80% | SEL: down to:1.5-1.2kJ/m ³ |
| Solar Thermal Collectors for DHW | Dwellings: 3- 5 m ² /+500- 800 l storage per residential unit, NRB with 2- 3 m ² per shower unit + 300- 400 l/ storage per unit | In some provinces (e.g. Styria) residential buildings are obliged to have solar thermal collector | Dwellings: 3-5m ² |
| Advanced lighting system design with daylighting controls | Dwellings: 10- 12 m ² high efficient solar evacuated tube collector + > 1,000 l storage/ unit s | | With daylight and dimming control. |

Core Technology Bundle Compared

Passive House Institute

- Energy Target: heating < 15kWh/a (site energy), total < 120kWh/a ,
- Insulation levels for BE components < 0.15 W/(m² K) – walls and roofs
- Window characteristics < 0.85 W/(m² K)
- BE air tightness < 0.6ACH @50Pa
- Thermal bridges mitigation
- HR from return air Eff > 75%
- Project component s certification
- Building post occupancy certification

DER

- Site energy Target: 50% from the baseline, but better than the minimum national standard
- Insulation levels for BE components by climate zone
- Window characteristics by climate zone
- BE air tightness (e.g., 0.15 cfm/ft² @75Pa – USA)
- Thermal bridges mitigation
- DOAS
- HR from return air
- Duct air tightness and insulation levels (current national standards)
- Hot and cold water pipe insulation
- Lighting levels and LPD
- Project Delivery Quality Assurance

Potential for Site and Source Energy Use Reduction for DER Projects using Core Bundles of Technologies and Beyond

STANDARD

ANSI/ASHRAE/IES Standard 100-2015
(Supersedes ANSI/ASHRAE/IESNA Standard 100-2006)

Energy Efficiency in Existing Buildings

Approved by the ASHRAE Standards Committee on January 28, 2015; by the ASHRAE Board of Directors on January 28, 2015; by the Illuminating Engineering Society on February 1, 2015; and by the American National Standards Institute on February 2, 2015.

This standard is under continuous maintenance by a Standing Standard Project Committee (SSPC) for which the Standards Committee has established a documented program for regular publication of addenda or revisions, including procedures for timely, documented, consensus action on requests for change to any part of the standard. The change submittal form, instructions, and deadlines may be obtained in electronic form from the ASHRAE website (www.ashrae.org) or in paper form from the Senior Manager of Standards. The latest edition of an ASHRAE Standard may be purchased from the ASHRAE website (www.ashrae.org) or from ASHRAE Customer Service, 1791 Tullie Circle, NE, Atlanta, GA 30329-2305. E-mail: orders@ashrae.org. Fax: 678-539-2129. Telephone: 404-636-8400 (worldwide), or toll free 1-800-527-4723 (for orders in US and Canada). For reprint permission, go to www.ashrae.org/permissions.

ENERGY

EFFICIENT TECHNOLOGIES AND MEASURES FOR BUILDING RENOVATION

US Army Corps of Engineers®

Annex 61 DER Guide - Outline

- **Introduction**
- **What is Deep Energy Retrofit**
- **Energy efficiency technologies and strategies**
- **Core technologies for DER**
- **Building Envelope**
 - Wall and roof cross-sections
 - Insulation types and levels for different climate conditions
 - Thermal Bridges
 - Window types and characteristics for different climate conditions
 - Air barrier requirements
 - Water and Vapor control for different climate conditions
- **Lighting systems**
- **HVAC systems : core requirements to energy efficiency of equipment, HR, ducts and pipes**

Examples of Thermal Bridges: Parapets, doors, slabs

Thermal Bridges

Details of Major Magnitude

1. At Eaves/Ridge
2. Window and Door Fitting – Head, Sill and Jamb
3. At Projections, Shades Or Intermediate Floors
4. Internal Walls to External Walls
5. Intermediate Floors
6. At Grade

Details of Minor Magnitude

1. Wall Corner – Never Usually an Issue
2. Threshold or Door
3. Duct and Service Connections
4. Penetrations at Installations in Roof; PV or Water Tanks

Example of Window Replacement Sequencing (with improved insulation, air and thermal barriers)

Window Installation

Steel Stud wall with exterior insulation and brick facade

Starting out we have the steel studs

Gypsum wall board is then added to exterior

After that an air/water barrier can be placed over the sheeting

A pre-wrapped treated timber or ply wood buck is added to all four sides of the reveals

The wood buck needs to be sealed at the corners and connected with self adhesive membrane to the air/water control membrane

The wood buck needs to be sealed at the corners and connected with self adhesive membrane to the air/water control membrane

ERDC - CERL 12/2014

Thermal Bridge Mitigation

Typical detail poor thermal bridge

Insert thermal break

Wrap the parapet

Building Air Tightness

| Country | Source | Requirement | cfm/ft ² @ 75Pa |
|----------------|--|--|----------------------------|
| Estonia | Ordinance No. 58. RT I, 09.06.2015, 21, 2015 | ≤6 m ³ /(h·m ²) @ 50Pa - renovation ≤3 m ³ /(h·m ²) @ 50Pa - new construction | 0.42 0.21 |
| Austria | OIB RL 6, 2011 for buildings with mechanical ventilation | 1.5 1/h at 50 Pa | 0.28 |
| Denmark | Danish Building Regulations BR10 [48] | 1.5 1/h at 50 Pa | 0.28 |
| Germany | DIN 4108-2 | 1.5 1/h at 50 Pa | 0.28 |
| USA | USACE ECB for all buildings [21], ASHRAE Standard 189.1-2011, 2013 Supplement, ASHRAE Standard 189.1.–2013 Supplement, ASHRAE Standard 90.1 - 2013 | | 0.25 |
| | USACE HP Buildings and DER proposed requirement | | 0.15 |
| Latvia | Latvian Construction Standard LBN 002-01 for buildings with mechanical ventilation | 2 m ³ /(m ² h) at 50 Pa | 0.14 |
| UK | TS-1Commercial Tight | 2 m ³ /h/m ² at 50 Pa | 0.14 |
| CAN | R-2000 | 1 sq in EqLA @10 Pa /100 sq ft | 0.13 |
| Germany | Passive House Std | 0.6 1/h at 50 Pa | 0.11 |

Based on four-story building, 120 x 110 ft, n=0.65.

Sealing the Building Envelope

- Top
- Bottom
- Vertical Shafts
- Outside Walls
- Compartmentalize

Lighting – Improved Design and Technology

Lighting Design Guide for Low Energy Buildings – New and Retrofits

**Optimal illuminance
Reduced electrical power**

RECOMMENDED LIGHTING POWER DENSITY AND ILLUMINANCE VALUES

| Space Type | Target Illuminance | Target LPD |
|----------------------------------|--------------------|------------------------|
| Common Spaces | | |
| - Conference Room | 40 fc | 0.80 W/ft ² |
| - Corridor | 10 fc | 0.50 W/ft ² |
| - Dining | 20 fc | 0.60 W/ft ² |
| - Dishwashing/ Tray Return | 50 fc | 0.65 W/ft ² |
| - Kitchen/ Food Prep/ Drive Thru | 50 fc | 0.65 W/ft ² |
| - Living Quarters | 5-30 fc | 0.60 W/ft ² |
| - Mechanical/ Electrical | 30 fc | 0.70 W/ft ² |
| - Office (Open) | 30-50 fc | 0.70 W/ft ² |
| - Office (Enclosed) | 30-50 fc | 0.80 W/ft ² |
| - Reception/Waiting | 15-30 fc | 0.50 W/ft ² |
| - Restroom/ Shower | 20 fc | 0.80 W/ft ² |
| - Server Room | 30 fc | 0.85 W/ft ² |
| - Serving Area | 50 fc | 0.70 W/ft ² |
| - Stair | 10 fc | 0.50 W/ft ² |
| - Storage (general) | 10 fc | 0.50 W/ft ² |
| - Storage (dry food) | 10 fc | 0.70 W/ft ² |
| - Telecom / Siprnet | 50 fc | 1.20 W/ft ² |
| - Vault | 40 fc | 0.70 W/ft ² |
| Training | | |
| - Readiness Bay | 40 fc | 0.75 W/ft ² |
| - Training Room (Small) | 15-30 fc | 0.70 W/ft ² |
| Vehicle Maintenance | | |
| - Consolidated Bench Repair | 50 fc | 0.60 W/ft ² |
| - Repair Bay/ Vehicle Corridor | 50 fc | 0.85 W/ft ² |

Advanced HVAC Systems

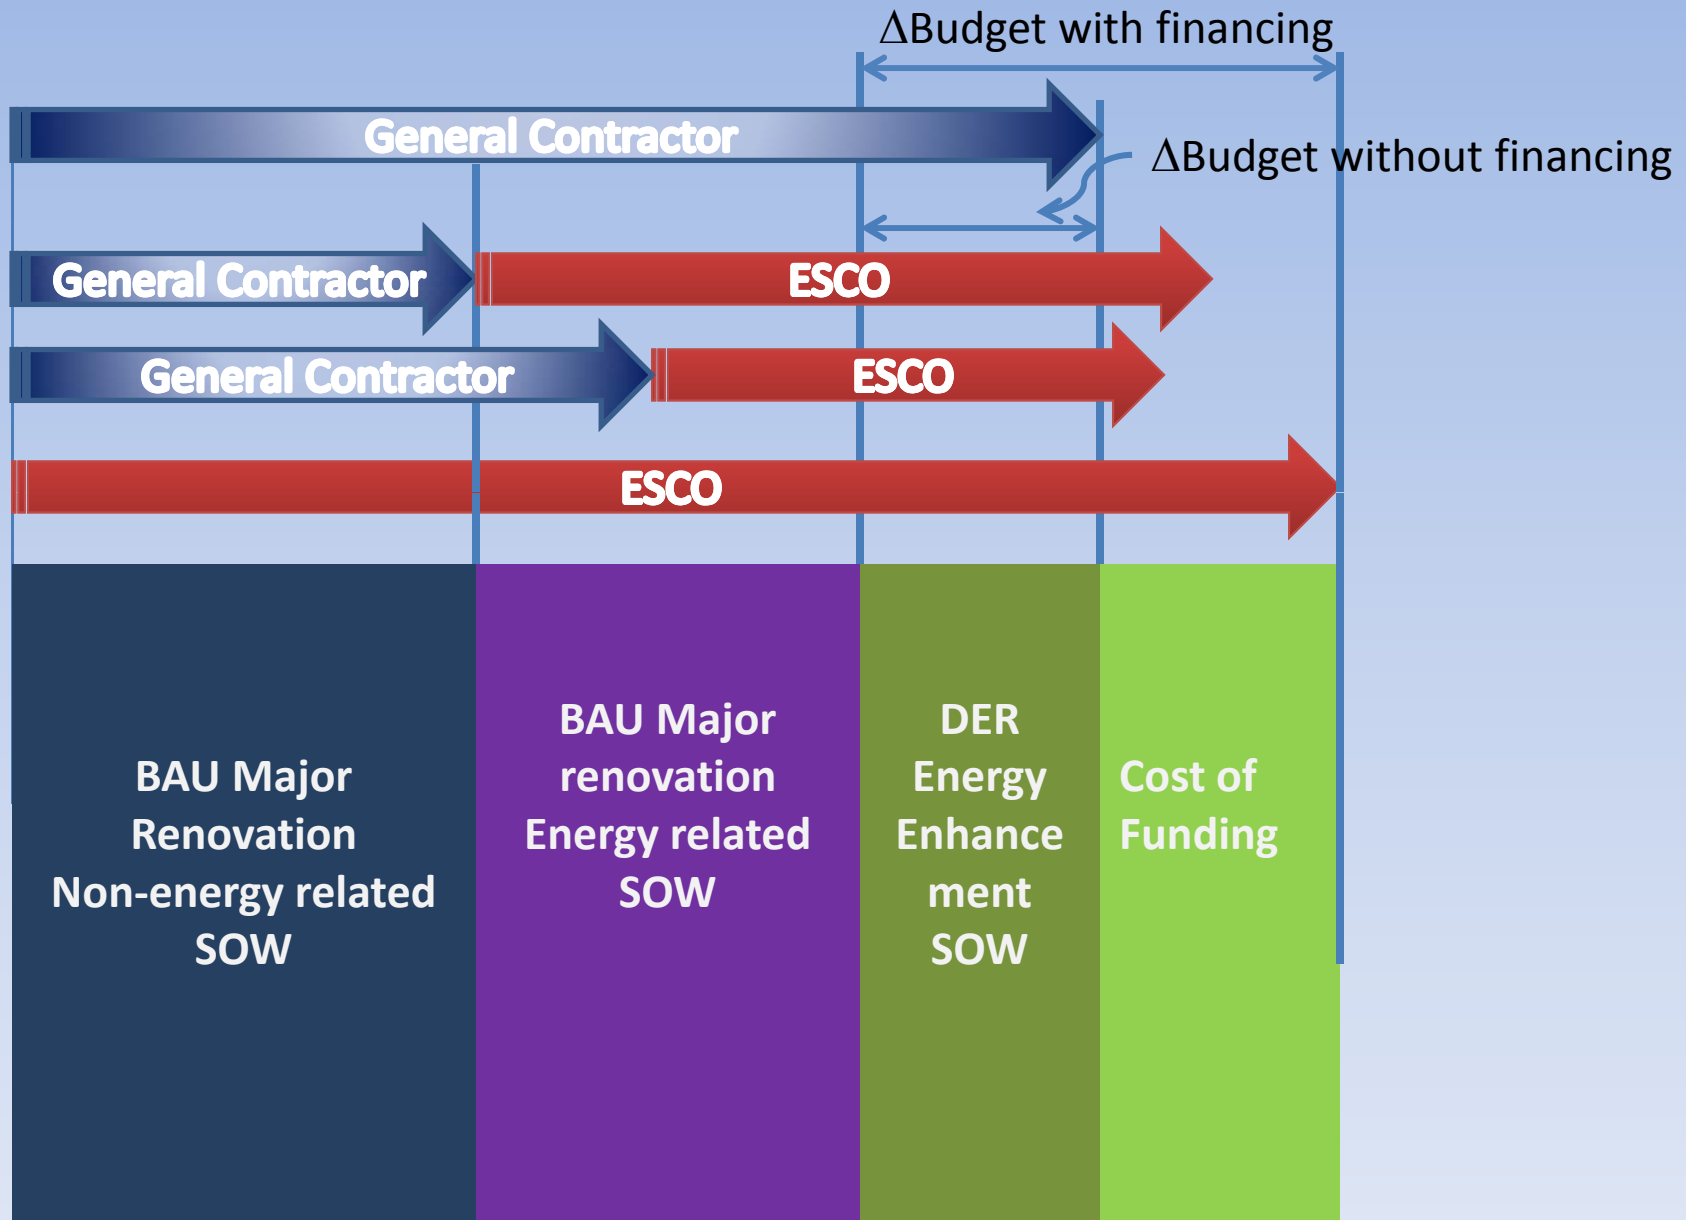

- Dedicated outdoor air system (DOAS)
- Heating and Cooling equipment per current national standard
- Heat recovery (sensible and latent)
- Duct air tightness – class C
- Hot and chilled water pipes insulation per current national standard

| Country | HVAC Standard |
|---------|---|
| Austria | EN 1507, EN 12237 ÖNORM H 5057, OIB RL 6, 2011 |
| China | GB 50243-2002 GB50736-2012 GB50198-2005 |
| Denmark | Standard 447 Standard 452 |
| Estonia | EVS-EN 13779, EN 12237 Ordinance No. 70. RT I, 09.11.2012, 12 |
| Germany | EnEV 2014, DIN V 18599- 2 and 7 DIN 1946- 6, DIN EN 13779 DIN 24192 II/III/IV DIN 4108- 6, DIN 4701- 10, EnEV 2009/2014 |
| Latvia | Latvian Construction Standard LBN 231-03 Latvian Construction Standard LBN 003-01 |
| UK | BS EN 15727:2010 BS 5422:2009 Non-Domestic Building Services Compliance Guide:2013 |
| USA | ASHRAE Std 90.1 2010 |

Quality Assurance Includes

- Detailed technical specification, against which tenders will be made, and verification of understanding of these specifications by potential contractors,
- Specification in SOW/OPR of areas of major concern to be addressed and checked during the bid selection, design, construction, commissioning and post-occupancy phases;
- Clear delineation of the responsibilities and qualifications of stakeholders in this process.

DER Implementation Strategies

Allowable (Cost Effective) Budget Increase for DER

$$\Delta \text{Budget}_{\max} = \text{NPV} [\Delta \text{Energy} (\$)] + \text{NPV} [\Delta \text{Maintenance} (\$)] + \\ \text{NPV} [\Delta \text{Replacement Cost} (\$)] + \text{NPV} [\Delta \text{Lease Revenues} (\$)]$$

$$\Delta \text{Budget}_{\max} = \text{SR}_E [\Delta \text{Energy} (\$)] + \text{S}_M [\Delta \text{Maintenance}] + \text{S}_L [\Delta \text{Lease Revenues}]$$

$$\text{NPV} [\Delta G \times C_G] = [\Delta G]_{t=1} \times C_{G(t=1)} \times (1+e)/d-e \times [1 - (1+e)/1+d]^N = [\Delta G]_{t=1} \times C_{G(t=1)} \text{S}_E$$

S_M and S_L scalars can be calculated and are the uniform present worth factor series that use the discount rate, the same way as SR_E with the escalation rate $e=0\%$.

NPV = Net Present Value function

N = study life in years

d = discount rate

e –escalation rate

Examples of SR or selected economic project life, interest, discount and escalation rates.

| No.* | Economic Life (yrs) | | 5 | 10 | 15 | 20 | 25 | 30 | 35 | 40 | 45 | 50 |
|------|---------------------|------------|-----|------|------|------|------|------|------|------|------|-------|
